

The Future of Full Body Plethysmography

✓ Accuracy as standard:

The Ergoflow flow sensor used with the Bodystik full body plethysmography system, draws on an incredible variable orifice design, which prevents increase in flow resistance at increased flow rates, found with most flow sensors. It is designed and tested to meet all ATS ERS flow and volume waveforms and manufactured to ensure accuracy at better than $\pm 3\%$.

✓ Configurable Hardware:

The Bodystik has been designed as a totally modular system allowing a relatively low cost entry level, for simple body plethysmography with the option to add options such as Bronchial Provocation, Nitrogen Washout and CO Diffusion.

✓ Total Compatibility

The Bodystik comes as standard with full network compatibility allowing all data to be easily shared between multiple devices, or other Blue Cherry review stations and diagnostic systems. Furthermore with the new HL7 compatibility data can be sent directly to local hospital information systems.

✓ Accurate all round testing:

With the lowest ever effective dead space of less than 20ml in the flow sensor and the adjustable design of the new Electronic stand ensures that the Bodystik can be used to test children and adults alike. Together with the adjustable swinging seat the Bodystik is one of the most comfortable testing devices available today.

✓ Always up to date:

Using an internet connection Blue Cherry software can automatically download updates, ensuring the system is always up to date.

Solid reliable construction:

- Aluminium cabin for maximum temperature stability.
- 5 Glazed Sides for maximum light and patient comfort.
- Height adjustable stand for optimum patient comfort.
- Electromagnetic door locking for simplicity and safety.
- Revolutionary swing out seat for excellent patient access.
- Lowest possible footprint to fit any lab.

Powerful diagnostic software:

- Using the Powerful Blue Cherry diagnostic software.
- Software for full spirometry as standard.
- Includes Rocc and MIP/MEP measurement.
- Full ATS/ERS compliance for all measurements.
- Complete flexibility in screen layout and report design.
- Powerful statistics and trend of results.
- Integrated Network compatibility.
- Full HL7 integration options available.

Add the Bodystik to your existing diagnostic suite with Blue Cherry software all the measurements can be integrated into a single unit and diagnostic centre.

Technical Data:

Technical Data:	Dimensions: Weight:	750 mm x 850mm x 1700mm (L x W x H) 140 kg

All Geratherm Respiratory products are designed to meet the ATS and ERS criteria and other international standards and guideline's where required. The Bodystik complies with DIN EN ISO 23747.
All Geratherm products are manufactured in accordance with DIN EN 13485.
